

What does CBD do

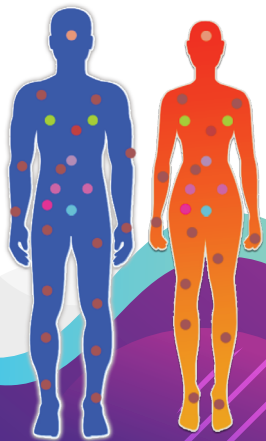

Studies have shown Cannabidiol (CBD) may help with everyday stress, anxiety, mental performance, positive mood, improved sleep, relaxation, inflammation, auto-immune issues, pain and discomfort, and much more. New studies are coming out all the time, and you should do some research on your own.

Science has begun to uncover the vital role of your body's Endocannabinoid System (ECS) and how it supports the proper function of virtually every part of your body.

Phyto-cannabinoids are found in a variety of herbs and vegetable that make up a healthy balanced diet. When we become nutrient deficient because of our eating habits, our ECS doesn't function properly, which can impair other bodily functions.

CBD is believed to be one of the most effective sources of non-psychoactive phyto-cannabinoids available for helping to bring your ECS back into balance.

Care Beyond's Excel/Extreme Nano Patches and Power Ease Tape are a simple and highly effective means in helping your ECS.

NANO ENHANCED CBD PATCHES & TAPE

NANO ENHANCED CBD PATCHES & TAPE

- ✔ Ultra Fast and Efficient Uptake. Absorbs Up to 10 X More Efficiently than CBD Oils and Balms
- ✔ Lasts 24 Hours or More
- ✔ THC Free - Lab Certified for Quality and Content
- ✔ Easy to Apply and Comfortable
- ✔ With 4% Lidocaine for Extra Topical Pain Relief (Extreme Patch & Power Ease only)

Care Beyond's Power Ease tape represents a massive improvement over standard K-tape. Using premium cotton and spandex, its therapeutic performance is dramatically improved by infusing it with 80mg of pure, nano-enhanced CBD Isolate and 4% Lidocaine. These vital enhancements can provide unmatched therapeutic benefit for your body's Endocannabinoid system, as well as localized pain relief.

In its conventional form, kinesiology tape (aka "K-Tape") is a therapeutic stretchy tape that mimics the skins' elasticity. It is typically applied to various joint and muscle areas of the body to help reduce pain and swelling, support and decompress injured muscles and joints, and improve physical performance without restricting range of motion. With proper application techniques, K-tape may also help reduce the appearance of scar tissue after surgery.

Each patch contains 20 Mg of pure CBD that has been "nano enhanced", meaning that the CBD particles have been scientifically reduced in size to a billionth of a meter or less. This helps you to get virtually ALL of the amazing health benefits of pure CBD, but in a delivery form that is taken up by your body about 10 times more effectively than regular CBD oil. Each patch lasts up to 24 hours. Just stick it on your skin and forget it!

So why is the Excel/Extreme patch so much more effective? Your body is more than 70 percent water. Because regular CBD oil is "lipophilic", or "fat loving", your body doesn't absorb it very well. However, CBD in its nano form can pass directly through your skin for nearly total absorption into your system. This brings you a potentially greater health response from a smaller amount of CBD!

"Nano Enhanced" is a process where CBD is run through a special laboratory process to produce tiny particles. This allows for it to go to work extra quickly on your body with unparalleled bio-availability. These particles are absorbed up to 10 times more effectively than the oils and balms you see around today.

The ultra thin patch can be applied directly to any body part or specific sore spot for immediate and effective CBD relief. It also continues to provide ongoing delivery of bio-available CBD throughout the rest of your body to help keep your ECS in balance for up to 24 hours.
